Applied AI Platform Engineer with 15+ years of experience spanning cloud infrastructure, DevOps, and enterprise AI platform engineering. Currently leading the AI Platform Engineering initiative at Liquidity Capital – architecting an agent-driven platform that uses LLMs to eliminate manual infrastructure friction and accelerate engineering velocity across the organization.

Presented a cost-savings analysis to leadership identifying ~\$4,700/month in immediate waste and up to \$60,000/year in additional savings, securing executive buy-in for the AI platform initiative. Built the platform foundation in production: a Python Discovery Agent that inventoried 9,798 AWS resources across 181 resource types, a Platform MCP Server exposing AWS, GitHub, Jira, and Bedrock as Claude tools, and a hardened CDK construct library that enforces security at synth time. On that foundation, architected Maestro – an agent-driven platform (Pydantic AI sub-agents + FastAPI gateway on EKS, AWS Bedrock Claude) – now being built out.

Experienced in translating complex AI and infrastructure concepts for both engineering teams and executive stakeholders, designing scalable cloud-native architectures, and integrating LLM-powered agents into enterprise workflows. Background includes enterprise client-facing work across India and the UAE, with hands-on experience navigating multi-stakeholder environments at organizations including Infosys, Paytm, and Adobe.

WORK EXPERIENCE

Senior Platform Engineer (AI Platform Lead)

Feb/2023 — Present

Liquidity Capital

Abu Dhabi, UAE

- Led the AI Platform Engineering initiative, architecting an agent-driven infrastructure platform; presented cost-savings analysis to leadership identifying ~\$4,700/month in immediate savings and up to \$60,000/year in waste, securing executive sponsorship for the programme.
- Built a Python Discovery Agent (async boto3 + STS AssumeRole) that scanned 4 AWS environments, inventoried 9,798 resources across 181 types, and produced the evidence base for infrastructure investment decisions presented to C-level stakeholders.
- Architected Maestro, an agent-driven platform – designed the multi-agent framework (Pydantic AI sub-agents for infrastructure intelligence, build investigation, and IaC generation), the FastAPI gateway on EKS (AWS Bedrock Claude), and the evaluation criteria for agent accuracy and reliability; evaluated LiteLLM as an AI Gateway layer for provider-agnostic routing, per-agent cost tracking, and guardrails. Built the production foundation it runs on (discovery, MCP, hardened IaC); the agent layer is in active build.
- Built Platform MCP Server exposing AWS, GitHub, Jira, TeamCity, and Bedrock APIs as Claude tools (~35 tools, with destructive-action deny-list, read-only mode, and per-tool usage tracking); onboarded engineering teams and gathered feedback to iterate on tool behaviour.
- Used Claude AI (Anthropic) to analyse infrastructure inventory patterns, propose L3 constructs from live AWS state, and draft production CDK code reviewed and approved by engineers – demonstrating Claude integration patterns now being adopted across the platform.
- Engineered 23 production-ready L3 CDK constructs (Python) with hardened security baselines – encryption hardcoded, mandatory tags, instance allowlists – and 10 CDK Hardening Aspects enforcing compliance at synth time across all stacks.
- Designed a 3-layer IaC security enforcement model – L3 constructs (structural compliance), CDK Aspects (synth-time validation), and AWS SCPs (API-level guardrails).
- Designed Authentication & Authorization architecture for the agent platform using Amazon Cognito + OpenFGA (Zanzibar-style relationship model) with RBAC across C-level, engineer, and platform roles.
- Architected multi-account AWS access model using IRSA and STS AssumeRole with per-agent IAM role boundaries, ensuring zero-credential exposure across the agent mesh.
- Designed cloud-native architecture on Amazon EKS using Helm, ensuring SOC2-compliant deployments.
- Leading evaluation and planning for CI/CD migration from TeamCity to GitHub Actions + ArgoCD for Kubernetes deployments.
- **Tech Stack:** AWS CDK (Python), AWS Bedrock (Claude Sonnet), Claude API (Anthropic), LiteLLM (AI Gateway), Pydantic AI, FastAPI, MCP (Model Context Protocol), Amazon EKS, Helm, IRSA, PostgreSQL (RDS), GitHub Actions, ArgoCD, OpenFGA, Amazon Cognito, Python, Terraform

DevOps Engineer

Sep/2021 — Feb/2023

Beamtrail

Abu Dhabi, UAE

- Automated end-to-end development lifecycle for complex hardware-integrated systems.
- Designed and implemented fully automated CI/CD pipelines.

- Improved release consistency through semantic versioning automation.
- Optimized build and deployment workflows for scalability and reliability.
- **Tech Stack:** Jenkins, GitLab CI, Docker, Kubernetes, Conan, Python, Bash

Engineering Manager - DevOps

Feb/2021 — Sep/2021

One97 Communications (Paytm)

Noida, India

- Led DevOps engineering team at one of India's largest fintech platforms, navigating a complex multi-stakeholder environment across product, engineering, and infrastructure organizations.
- Designed CI/CD pipelines for critical services, reducing manual deployment efforts and improving release velocity for engineering teams across the organization.
- Led Kubernetes (EKS) adoption and Helm-based deployment standardization across multiple product teams.
- Improved infrastructure cost efficiency through performance tuning and right-sizing.
- Designed disaster recovery architecture for high-availability systems.
- **Tech Stack:** Kubernetes, Helm, EKS, Jenkins, GitLab CI, Docker, Terraform

Lead DevOps Engineer

Sep/2018 — Feb/2021

Xebia IT Architects (Client: Digital14 / KATIM)

Abu Dhabi, UAE

- Served as lead technical advisor for a strategic UAE government-aligned client, translating security and infrastructure requirements into actionable architecture decisions.
- Managed secure PKI-based applications across on-prem and Azure environments.
- Automated infrastructure provisioning using Terraform and configuration management using Ansible.
- Streamlined CI/CD pipelines for secure and scalable deployments.
- **Tech Stack:** Azure, Jenkins, Ansible, Terraform, PKI

Senior Web Developer

Mar/2016 — Sep/2018

Optum | United Health Group

Noida, India

- Developed and maintained enterprise web applications using Adobe Experience Manager (AEM).
- Implemented CI/CD pipelines and containerization strategies for improved deployment efficiency.
- **Tech Stack:** Adobe Experience Manager, Jenkins, Docker, Java

Senior Application Engineer

Dec/2014 — Feb/2016

Interra Systems

Noida, India

- Built integrations using REST, SOAP, and XML-RPC APIs.
- Automated workflows and improved system interoperability.
- **Tech Stack:** Java, XML, REST APIs, SOAP

Technical Consultant - AEM

Sep/2014 — Dec/2014

Adobe

Noida, India

- Provided root cause analysis and resolved production issues for enterprise clients, acting as the primary technical point of contact during critical incidents.
- Improved system stability through proactive patching and architecture improvements.
- **Tech Stack:** Adobe Experience Manager, Java, CMS

Senior Systems Engineer

Sep/2011 — Apr/2014

Infosys Technologies

Pune, India

- Developed enterprise CMS solutions and supported large-scale deployments for enterprise clients across India.
- Participated in system design, development, and migration projects within a large cross-functional delivery organization.
- **Tech Stack:** Java, J2EE, XML, Servlets, Oracle SQL

EDUCATION

Dehradun Institute of Technology

Dehradun, India

Bachelor of Technology (Information Technology)

Sep/2007 — Sep/2011

SKILLS & LANGUAGES

Technical Skills

AI/GenAI: Multi-Agent Systems (Pydantic AI), RAG & Vector Search (pgvector), LLM Serving (vLLM / Bedrock), AWS Bedrock (Claude Sonnet), Claude API (Anthropic), LiteLLM (AI Gateway),

Programming

Python, FastAPI, SQLAlchemy, Java, SQL, Bash

MCP (Model Context Protocol), LLM Evaluation & Evals Design, LLM Deployment & Orchestration, AWS CDK IaC Generation, Prompt Engineering, MLOps & AI Infrastructure
Cloud/DevOps: AWS, Azure, AWS CDK (Python), Terraform, Kubernetes, Docker, Helm
CI/CD: GitHub Actions, ArgoCD, Jenkins, GitLab CI, TeamCity
Monitoring: Datadog, Groundcover, Prometheus, Grafana, ELK Stack, OpenTelemetry

Certifications

Certified Kubernetes Administrator, Certified Kubernetes Developer, AWS Cloud Practitioner, AWS Solutions Architect Associate

Languages

English, Hindi

Soft Skills

Executive Communication, Technical Storytelling, Stakeholder Management, Leadership, Problem Solving, Collaboration
